

Flexible and easy order pick-up with StrongPoint's locker solution

Fully customizable – mix & match modules and multiple door sizes

Can be built into the wall for indoor usage or outdoor with optional roof

Fast installation – less than one day needed for on-site installation

Works as part of a Last Mile platform for flexible e-commerce delivery

Loading app – compartments opened and locked via smartphone

Automated SMS customer communications

AI-age verification – allows 24/7 pickup of age-controlled items

Reserve specific lockers, including reserving lower compartments

Durable, 5+ year deployments in harsh weather conditions

Remote monitoring, cloud-based and automatic alerts sent to staff

Lockers for an efficient Last Mile delivery

StrongPoint's Locker solution provides a smooth and customer friendly delivery of orders and can be integrated or combined with other delivery options in our Last Mile platform (Drive-Thru, In-store Pickup, Home Delivery).

DIY and electronic stores have seen a big increase in online orders in recent years and a locker solution, combined with our application for delivery management, improves the end customer experience as well as cutting costs on e-commerce orders.

StrongPoint's Lockers enables 24/7 order pick up which is essential for people that need access to their orders outside store opening hours. Orders can be accessed using a QR code, PIN code or via customers' smart phone.

1. Locker is loaded
2. Customer communication
3. Customer accesses order
4. Customer collects order

Modular design and flexible door sizes

Modules with different door sizes are available to fit the sizes of the delivered orders and packages.

Optional addons:

- ✓ Payment terminal
- ✓ 2D scanner
- ✓ NFC reader
- ✓ Surveillance system

Delivery options to ensure efficiency and ease for staff and customers

StrongPoint offers several delivery options for retailers, which ensures there is a solution to suit any customer requirement or order size, such as a locker or drive-thru.

StrongPoint's AI Drive-Thru scans the car registration plate which alerts staff. Customers can sit and wait in their car whilst their order is loaded into the boot.
